

Press Release

Opedo Software Launches "Active Audio" on the App Store, the World's First Dynamic Music App

VANCOUVER, BC, November 21, 2011 – “Active Audio” has pioneered the field of motion controlled music, making the listening experience interactive and dynamic. Using proprietary state-of-the-art accelerometer signal analysis (patents pending), “Active Audio” detects the motion of your body and adjusts the rhythm of the music to match. As you speed up and slow down, “Active Audio” fits the music pace to your movement. Making all activities such as running, jogging, biking, skateboarding, snowboarding and skiing more engaging and enjoyable. By matching music tempo to the pace of your activity, it has been scientifically proven to benefit your exercise. Increasing your speed and lowering your fatigue. From a simple stroll to a demanding triathlon, the Active Audio App engages your music to interact with you directly. Soundtrack Your Life™

As with other pedometers, “Active Audio” counts your Calories burned and distance traveled, but by using patented technology, it is the only App that can work with your iPhone anywhere on your body, and track fast sprints.

The Active Audio App is available for \$1.99 from the App Store on iPhone and iPod touch, or at <http://www.itunes.com/appstore>.

To learn more about “Active Audio,” and for screenshots, visit the official website at <http://www.opedo.com/activeaudio.htm>, or contact Opedo Media Relations at contact@opedo.com.
